Experience

Lead Front-end developer at Keesing Technologies
Keesing Technologies specializes in ID verification solutions

Designing and developing Keesing's customer-facing ID verification web app from the ground up.

Making key technical decisions while designing intuitive, user-friendly interfaces and expanding the existing design system.

Established a monorepo alongside the existing application to build and maintain a shared component library, ensuring consistency and efficiency across projects.

March 2024 - Present

Front-end developer at Otovo
Otovo is the leading marketplace for residential solar in Europe.

As a front-end developer, I worked on a Next.js application by developing new features and setting up A/B tests. My role also involved collaborating with designers to balance UX and technical constraints.

Since 2023

Growth engineer at TomTom
Improving the TomTom e-commerce website through A/B tests

As part of a team with a growth marketer and a UX designer, I worked on enhancing the TomTom e-commerce website by making data driven choices.

This involved conducting user research, as well as analyzing data from analytics tools. By interpreting the results, we identified pain points encountered by customers and designed solutions to improve their experience.

Additionally, I was responsible for setting up A/B tests, implementing changes on the React website, and maintaining a Next.js project of marketing pages.

2019 - 2022

Front-end developer at GoOut.net
GoOut is a ticketing platform for cultural events

I worked with a team of developers and designers.

My role included integrating Vue.js and adding new features to the web application. I focused on upgrading the ticketing process to meet event venue requirements.
